

FINAL REPORT - DOCSPOT

DocSpot: Seamless Appointment Booking for Health

Team ID	LTVIP2026TMIDS35442
Project Name	DocSpot: Seamless Appointment Booking for Health
Team Members	Botla Siva Satyanarayana Perabathula Satya Sai Manikanta Satya Srithadi Prathi Adithya Durga Sri Krishna Kumar

1. INTRODUCTION

1.1 Project Overview

DocSpot is a full-stack web application designed to simplify the process of booking doctor appointments. The platform connects patients with healthcare providers through an intuitive online interface, eliminating the need for traditional phone-based appointment scheduling. Built using the MERN stack (MongoDB, Express.js, React.js, Node.js), DocSpot provides separate dashboards for patients, doctors, and administrators, each with role-specific functionalities.

The system allows patients to browse doctors by specialization, view detailed profiles including qualifications and fees, book appointments by selecting date and time, upload medical documents, and manage their bookings through a personal dashboard. Doctors can register on the platform (pending admin approval), complete their professional profiles, set available timings, and manage appointment requests by approving or rejecting them. Administrators have oversight of the entire platform, including doctor verification, user management, and appointment monitoring.

1.2 Purpose

The purpose of DocSpot is to address the following challenges in traditional healthcare appointment booking:

- **For Patients:** Eliminate long phone calls, waiting on hold, and limited clinic hours by providing 24/7 online booking with real-time availability and transparent doctor information.
- **For Doctors:** Reduce administrative burden by digitizing schedule management, minimize no-shows through digital tracking, and increase visibility to potential patients.
- **For Administrators:** Ensure platform integrity through doctor verification, monitor platform activity, and maintain quality control.

2. IDEATION PHASE

2.1 Problem Statement

Primary Problem:

Patients struggle to book doctor appointments due to phone-only systems, limited clinic hours, no visibility into doctor availability or fees, and no way to track appointments. Doctors waste time on administrative tasks, face high no-show rates, and lack digital tools to manage schedules. Administrators cannot effectively verify doctor credentials or monitor platform activity.

Customer Problem Statements:

PS #	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A working professional with busy schedule	Book a doctor appointment without taking time off work	I have to call multiple clinics during work hours and wait on hold	Most clinics only accept phone bookings during limited hours	Frustrated and stressed
PS-2	A patient seeking a specialist	Find a qualified doctor with good reviews	I don't know which doctors are available or their consultation fees	There's no centralized platform with doctor information	Confused and uncertain
PS-3	A parent with sick child	Get urgent pediatric appointment	I don't know which clinics have same-day availability	No real-time visibility into doctor slots	Anxious and scared
PS-4	A busy doctor	Manage my appointment schedule efficiently	I receive phone calls at all hours for bookings	My receptionist can't handle the volume	Overwhelmed and stressed
PS-5	A platform administrator	Ensure only verified doctors join	Fake practitioners might try to register	No streamlined verification process	Concerned about platform credibility

2.2 Empathy Map Canvas

EMPATHY MAP 1: PATIENT USER

EMPATHY MAP 2: DOCTOR USER

EMPATHY MAP 3: ADMIN USER

2.3 Brainstorming

Date	16 February 2026
Team ID	LTVIP2026TMIDS35442
Project Name	DocSpot: Seamless Appointment Booking for Health
Maximum Marks	4 Marks

Team Members & Roles

Name	Role
Prathi Adithya Durga Sri Krishna Kumar	Full Stack Developer (MERN)
Botla Siva Satyanarayana	Full Stack Developer
Perabathula Satya Sai Manikanta	Frontend Developer
Satya Srithadi	Backend Developer

Step 1: Team Gathering, Collaboration, and Selecting the Problem Statement

Problem Statement:

To develop a seamless online doctor appointment booking platform called "DocSpot" that allows patients to easily find and book appointments with doctors, enables doctors to efficiently manage their schedules, and provides administrators with tools to oversee the entire healthcare ecosystem - ultimately improving healthcare accessibility and reducing the hassle of traditional appointment booking.

Motivation:

Booking a doctor's appointment traditionally involves long phone calls, waiting on hold, playing phone tag with busy receptionists, and limited visibility into doctor availability. Patients struggle to find the right doctor that matches their needs, while doctors face challenges in managing their schedules and reducing no-shows. DocSpot bridges this gap by providing a user-friendly online platform with real-time availability, doctor profiles, appointment management, and administrative oversight - making healthcare booking simple, transparent, and efficient for everyone.

Step 2: Brainstorming, Idea Listing, and Grouping

Initial Ideas:

- User registration and login system with email/password
- JWT-based authentication for security
- Browse doctors with filters (specialization, location, fees)
- Real-time doctor availability calendar
- One-click appointment booking
- Upload medical documents during booking
- Email notifications for confirmations and reminders
- Cancel and reschedule appointments
- View booking history in user dashboard
- Doctor registration with approval workflow
- Doctor profile management (qualifications, experience, fees)
- Doctor dashboard to manage appointments
- Approve/reject appointment requests
- Admin dashboard to monitor platform
- Admin approval for new doctor registrations
- User management for admins
- View all appointments across platform
- Responsive design for mobile and desktop
- Notification system for all users
- Secure password encryption with bcrypt
- MongoDB database for scalable data storage
- RESTful APIs for frontend-backend communication
- File upload system for medical documents
- Role-based access control (User/Doctor/Admin)
- Beautiful UI with Bootstrap and custom CSS
- Landing page with platform features
- About and Contact pages
- 404 error page handling
- Loading states and error handling
- Toast notifications for user feedback

Grouped into Modules:

Module	Features Included
1. Authentication Module	User Registration, Login, JWT Authentication, Password Encryption, Role-based Access
2. Doctor Discovery Module	Browse Doctors, Search Filters (Specialization, Location, Fees), Doctor Profiles, Availability Calendar
3. Appointment Booking Module	Book Appointment, Select Date/Time, Upload Documents, Instant Confirmation
4. Appointment Management Module	View Appointments, Cancel Appointment, Reschedule, Status Tracking (Pending/Approved/Completed)
5. Notification Module	Email Notifications, In-App Alerts, Appointment Reminders, Status Updates
6. Doctor Dashboard Module	Manage Schedule, View Requests, Approve/Reject Appointments, Profile Editing
7. Admin Dashboard Module	User Management, Doctor Approval, Platform Monitoring, View All Appointments
8. UI/UX Module	Responsive Design, Landing Page, Navigation Bar, Footer, Loading States, Error Handling
9. Profile Management Module	User Profile, Edit Details, View History, Notification Center
10. Database Module	MongoDB Schemas (Users, Doctors, Appointments), Data Relationships, Indexes

Step 3: Idea Prioritization (Final Version)

Feature / Module	Importance	Feasibility	Notes
Authentication Module	High	High	User registration and login with JWT – core requirement
Doctor Discovery Module	High	High	Browse and filter doctors – essential for user experience
Appointment Booking Module	High	High	Book appointments with date/time – primary functionality
Appointment Management Module	High	High	View, cancel, reschedule – user control
Notification Module	High	Medium	Email confirmations and reminders – improves engagement
Doctor Dashboard Module	High	High	Doctors manage their appointments – critical for workflow
Admin Dashboard Module	High	High	Platform oversight and doctor approval – ensures trust
Profile Management Module	Medium	High	User profile and history – enhances personalization
UI/UX Module	High	High	Responsive, clean interface – key to user adoption
Database Module	High	High	MongoDB with proper schemas – foundation of the system

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

PATIENT JOURNEY MAP

STAGES	AWARENESS	CONSIDERATION	REGISTRATION	BOOKING	POST-BOOKING & APPOINTMENT DAY
OBJECTIVES	User becomes aware of DocSpot and visits the platform	User browses doctors and evaluates if DocSpot meets their needs	User creates an account to book appointment	User books an appointment with selected doctor	User tracks appointment status and attends consultation
NEEDS	Find a reliable way to book doctor appointments online without phone calls	See available doctors, view qualifications, understand fees, check if specialists are available	Quick and simple registration process with email and password	Select convenient date and time, add reason for visit, upload documents if needed	Know if appointment is approved, remember appointment details, visit clinic
FEELINGS	Anxious about health, curious about options, hopeful to find solution	Hopeful to find right doctor, confused while comparing multiple doctors	Relieved when form is simple, frustrated if form has errors	Satisfied when booking completes, relieved to secure appointment	Happy when approved, anxious before visit, satisfied after consultation
BARRIERS	Too many options online, unsure which platform to trust, no prior knowledge of DocSpot	Hard to compare doctors, no patient reviews, specialization filter may not show all options	Long registration forms, password requirements unclear, duplicate email errors	Selected time slot may be unavailable, form errors, document upload fails	No status updates, forget appointment details, long wait at clinic
ADD NOTES OR COMMENTS	<ul style="list-style-type: none"> User searches Google for doctors Friends recommend DocSpot Lands on DocSpot homepage 	<ul style="list-style-type: none"> User sees Doctors List page Filters by specialization Views doctor profiles with qualifications, experience, fees 	Registration form asks name, email, phone, password <ul style="list-style-type: none"> Password encrypted with bcrypt Duplicate email check Success message appears 	<ul style="list-style-type: none"> Date picker for future dates Time slots available Reason for visit text field Document upload (images/PDF, 5MB max) Confirmation message after booking 	<ul style="list-style-type: none"> My Appointments page shows all bookings Status badges: pending, approved, rejected, completed, cancelled Cancel button for pending appointments User visits clinic on scheduled date

DOCTOR JOURNEY MAP

STAGES	REGISTRATION	PROFILE SETUP	DAILY OPERATIONS	CONSULTATION	FOLLOW-UP
OBJECTIVES	Doctor signs up to join the platform	Doctor completes profile with professional details	Doctor manages daily schedule and appointment requests	Doctor meets patient and provides care	Doctor completes appointment record
NEEDS	Create account to list practice and reach patients	Add qualifications, experience, consultation fees, available timings	See pending appointments, approve suitable slots, reject conflicts	Access patient information, provide consultation	Mark appointment as completed
FEELINGS	Excited to join, patient while waiting for approval	Productive while setting up, frustrated if form is complex	Organized with dashboard, in control of schedule	Focused on patient care, tired after long day	Satisfied with day's work
BARRIERS	Unsure if platform is trustworthy, registration form asks many details	Too many fields to fill, unsure what to include, time-consuming	Hard to see all requests at once, manual approval time-consuming	No access to patient history, interruptions during consultation	Forgetting to mark completed, no follow-up system
ADD NOTES OR COMMENTS	<ul style="list-style-type: none"> • Doctor registers with name, email, phone, specialization • Account created with "pending" status • Admin must approve before access 	<ul style="list-style-type: none"> • Profile form includes qualifications, fees • Day-wise timing selector • Bio and contact info • Profile visible after approval 	<ul style="list-style-type: none"> • Dashboard shows pending/approved/completed counts • Appointments page lists all requests • Patient documents visible • One-click approve/reject 	<ul style="list-style-type: none"> • Doctor views patient name and reason • Uploaded documents available • In-person consultation 	<ul style="list-style-type: none"> • Click "Complete" button after consultation • Status updates to "completed"

ADMIN JOURNEY MAP

STAGES	LOGIN	MONITOR DASHBOARD	DOCTOR VERIFICATION	USER MANAGEMENT	APPOINTMENT OVERSIGHT
OBJECTIVES	Admin accesses the platform management panel	Admin views platform statistics and pending items	Admin reviews and approves/rejects doctor applications	Admin monitors all platform users	Admin monitors all appointments on platform
NEEDS	Secure login to access admin features	See overview of users, doctors, appointments, pending approvals	Verify doctor credentials, ensure only qualified doctors join	View all registered patients and doctors	View all bookings, track platform activity
FEELINGS	Ready to manage platform	Informed about platform health	Productive when approving, stressed if fake profiles found	Organized with complete view	In control with complete oversight
BARRIERS	Forgot password, no reset option	Stats not real-time, hard to track trends	Manual verification time-consuming, cannot verify credentials directly	No search functionality, cannot filter users	Too many appointments to track, no filtering
ADD NOTES OR COMMENTS	<ul style="list-style-type: none"> Admin login with email/password Redirected to admin dashboard No password reset currently 	<ul style="list-style-type: none"> Dashboard shows total users, total doctors, pending doctors, total appointments Quick access to manage sections 	<ul style="list-style-type: none"> Pending doctors list View complete doctor profile Approve button updates to "approved" Reject button updates to "rejected" 	<ul style="list-style-type: none"> Users page lists all registered users Shows name, email, phone, role Can filter by user type 	<ul style="list-style-type: none"> Appointments page shows all bookings Filter by status Filter by date View patient and doctor details

3.2 Solution Requirements (Functional & Non-functional)

Date	16 February 2026
Team ID	LTVIP2026TMIDS35442
Project Name	DocSpot: Seamless Appointment Booking for Health
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	1.1 Registration through email and password 1.2 Password encryption using bcrypt 1.3 Phone number validation 1.4 Duplicate email check
FR-2	User Login	2.1 Login with email and password 2.2 JWT token generation 2.3 Token storage in localStorage 2.4 Session management
FR-3	Role-Based Access Control	3.1 Patient role with limited access 3.2 Doctor role with appointment management 3.3 Admin role with platform oversight 3.4 Protected routes based on role
FR-4	Doctor Discovery	4.1 List all approved doctors 4.2 Filter by specialization 4.3 View doctor profiles (qualifications, experience, fees) 4.4 Doctor cards with basic info
FR-5	Appointment Booking	5.1 Select appointment date 5.2 Select time slot 5.3 Upload medical documents 5.4 Add reason for visit 5.5 Submit booking request 5.6 Display confirmation message
FR-7	Appointment Management (Doctor)	7.1 View all appointment requests 7.2 Approve pending appointments 7.3 Reject appointments with reason 7.4 Mark appointments as completed
FR-8	Doctor Profile Management	8.1 Add/update qualifications

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
		8.2 Set consultation fees 8.3 Configure available timings (day-wise) 8.4 Add bio/description 8.5 Update contact information
FR-9	Admin Doctor Approval	9.1 View pending doctor applications 9.2 Review doctor details 9.3 Approve qualified doctors 9.4 Reject unqualified doctors
FR-10	Admin User Management	10.1 View all registered users 10.2 Filter users by type (patient/doctor) 10.3 View user details
FR-11	Admin Appointment Oversight	11.1 View all appointments 11.2 Filter by status 11.3 Filter by date
FR-12	Dashboard	12.1 Patient dashboard with upcoming appointments 12.2 Doctor dashboard with stats (pending/approved/completed) 12.3 Admin dashboard with platform metrics
FR-13	File Upload	13.1 Upload medical documents (images/PDF) 13.2 Multiple file upload support 13.3 File size limit (5MB) 13.4 View uploaded files in appointment details
FR-14	Logout	14.1 Secure logout clearing session 14.2 Redirect to home page

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	<ul style="list-style-type: none">• Intuitive UI with clear navigation• Responsive design works on mobile, tablet, desktop• Consistent color scheme (blue/white professional theme)• Loading states for async operations• Error messages with user-friendly language• Form validation with clear feedback• Maximum 3 clicks to book appointment
NFR-2	Security	<ul style="list-style-type: none">• Passwords hashed using bcrypt before storage• JWT tokens for authentication• Protected routes prevent unauthorized access• Role-based access control (patient/doctor/admin)• Environment variables for sensitive data• Input validation and sanitization• MongoDB injection prevention• File upload type restrictions (only images/PDFs)• File size limit (5MB)
NFR-3	Reliability	<ul style="list-style-type: none">• Graceful error handling with user feedback• Data persistence in MongoDB Atlas• Automatic reconnection on database failure• Consistent appointment status tracking
NFR-4	Performance	<ul style="list-style-type: none">• Page load time < 3 seconds• API response time < 500ms• Doctor list loads within 2 seconds• Supports 100+ concurrent users• Database indexing for faster queries• Optimized images and assets• Efficient MongoDB queries
NFR-5	Availability	<ul style="list-style-type: none">• Hosted on localhost during development• MongoDB Atlas cloud database (99.9% uptime)• Application available 24/7• Quick recovery from crashes• Graceful degradation on service failure
NFR-6	Scalability	<ul style="list-style-type: none">• MongoDB Atlas can scale with data growth• Stateless JWT authentication allows horizontal scaling• Modular architecture (separate frontend/backend)• Indexed collections for fast queries• Can add more server instances• React components reusable for future features

3.3 Data Flow Diagram

Date	16 February 2026
Team ID	LTVIP2026TMIDS35442
Project Name	DocSpot: Seamless Appointment Booking for Health
Maximum Marks	4 Marks

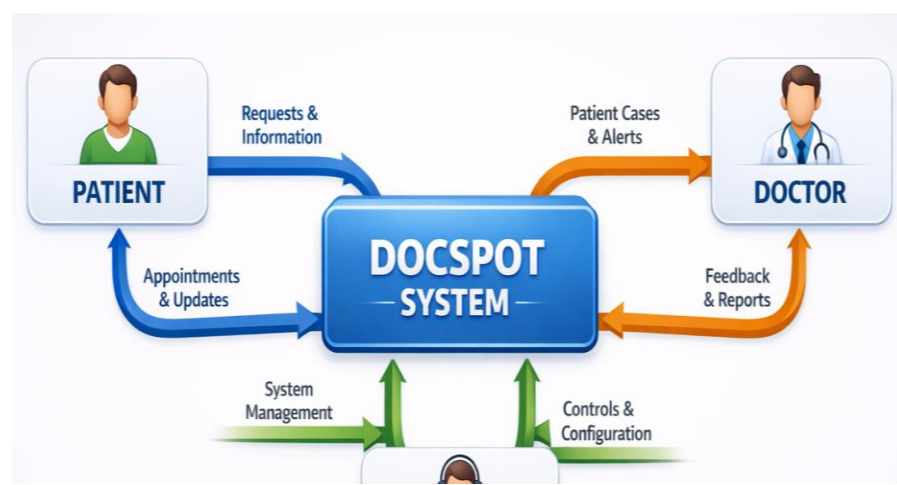

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

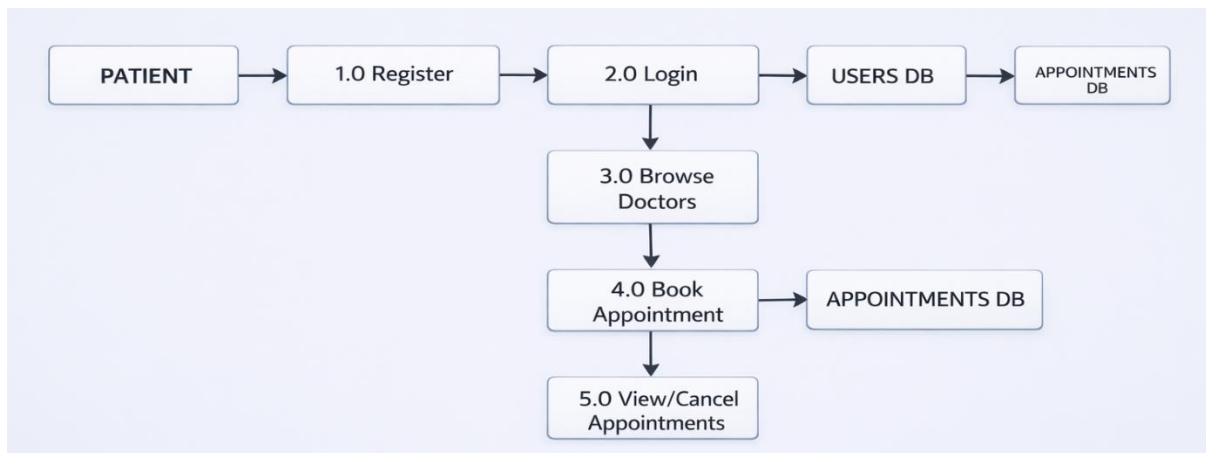

External Entities:

1. Patient - Books and manages appointments
2. Doctor - Manages schedule and appointments
3. Admin - Verifies doctors and monitors platform

DFD Level 0 (Industry Standard)

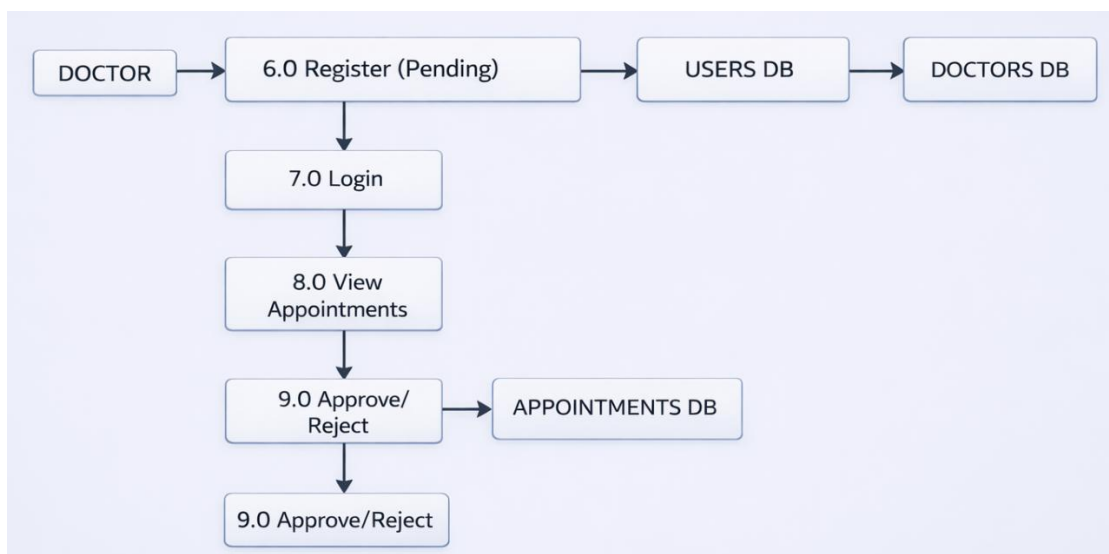

Level 1 DFD - Patient Processes

Processes:

1. 1.0 Register - Patient creates account with email/password
2. 2.0 Login - Patient authenticates using credentials
3. 3.0 Browse Doctors - Search and filter doctors by specialization
4. 4.0 Book Appointment - Select date/time and book
5. 5.0 View/Cancel Appointments - Manage existing bookings

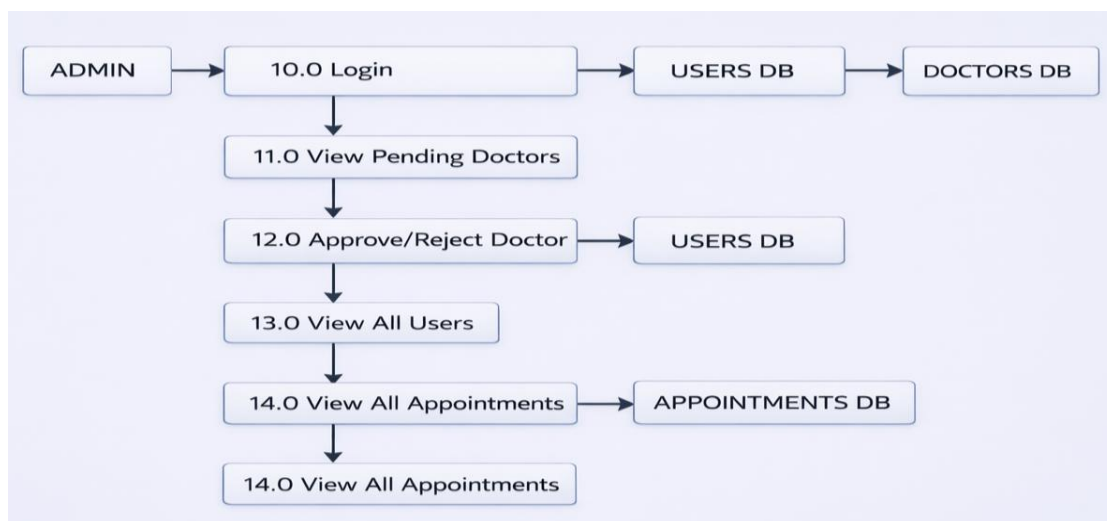

Level 1 DFD - Doctor Processes

Processes:

6. 6.0 Register (Pending) - Doctor applies with pending status
7. 7.0 Login - Doctor authenticates
8. 8.0 View Appointments - See all appointment requests
9. 9.0 Approve/Reject - Update appointment status

Level 1 DFD - Admin Processes

Processes:

10. 10.0 Login - Admin authenticates
11. 11.0 View Pending Doctors - See doctor applications
12. 12.0 Approve/Reject Doctor - Update doctor status
13. 13.0 View All Users - Monitor platform users
14. 14.0 View All Appointments - Overview of all bookings

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Patient	Registration	US-P-01	As a patient, I can register using my email, password, and phone number	I can access my dashboard after registration	High	Sprint-1
	Login	US-P-02	As a patient, I can log in using my email and password	I am redirected to my dashboard	High	Sprint-1
	Browse Doctors	US-P-03	As a patient, I can view all approved doctors with their specializations	List of doctors displays with names	High	Sprint-1
		US-P-04	As a patient, I can filter doctors by specialization	Only doctors of selected specialty are shown	High	Sprint-1
		US-P-05	As a patient, I can view doctor details including fees and experience	Doctor profile shows complete information	High	Sprint-1
	Book Appointment	US-P-06	As a patient, I can select a date and time to book an appointment	Date picker and time slots are available	High	Sprint-1
		US-P-07	As a patient, I can upload medical documents while booking	Files can be uploaded and attached to	Medium	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
				appointment		
		US-P-08	As a patient, I receive confirmation after booking	Success message with appointment details appears	High	Sprint-1
	Manage Appointments	US-P-09	As a patient, I can view all my appointments in history	My Appointments page shows all bookings	High	Sprint-1
		US-P-10	As a patient, I can see appointment status (pending/approved/rejected)	Status badges clearly indicate current state	High	Sprint-1
		US-P-11	As a patient, I can cancel my pending appointment	Appointment status changes to "cancelled"	High	Sprint-1
	Profile	US-P-12	As a patient, I can update my profile information	Changes are saved successfully	Medium	Sprint-1
	Logout	US-P-13	As a patient, I can securely logout	Session ends and I am redirected to home	High	Sprint-1
Doctor	Registration	US-D-01	As a doctor, I can register with my details (name, email, phone, specialization)	Account is created with "pending" status	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
	Login	US-D-02	As a doctor, I can log in using my email and password	I am redirected to doctor dashboard	High	Sprint-1
	Profile Management	US-D-03	As a doctor, I can complete my profile with qualifications and experience	Profile information is saved	High	Sprint-1
		US-D-04	As a doctor, I can set my consultation fees	Fees are displayed in my profile	High	Sprint-1
		US-D-05	As a doctor, I can set my available timings for each day of week	Timings are saved and displayed	High	Sprint-1
	Appointment Management	US-D-06	As a doctor, I can view all appointment requests	List of appointments with patient details is shown	High	Sprint-1
		US-D-07	As a doctor, I can approve pending appointments	Status updates to "approved" and patient is notified	High	Sprint-1
		US-D-08	As a doctor, I can reject appointments I cannot accommodate	Status updates to "rejected"	High	Sprint-1
		US-D-09	As a doctor, I can mark completed appointments	Status updates to "completed"	Medium	Sprint-1
	Dashboard	US-D-10	As a doctor, I can see counts of pending/approved/co	Dashboard shows statistics	Medium	Sprint-1

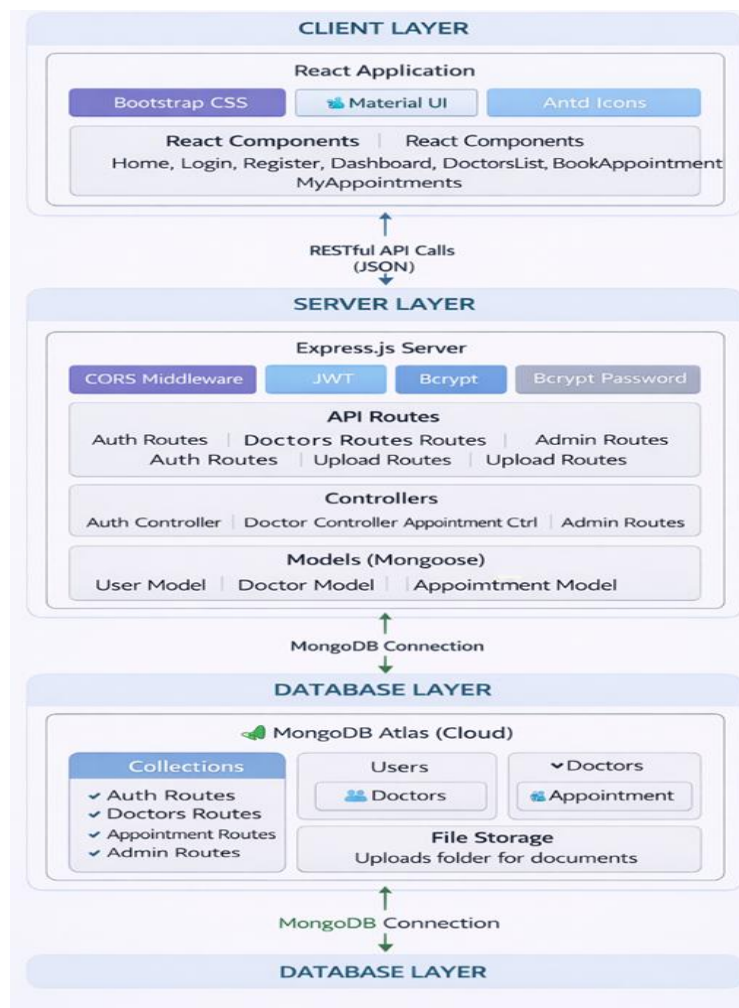

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
			Completed appointments			
	Logout	US-D-11	As a doctor, I can securely logout	Session ends and I am redirected to home	High	Sprint-1
Admin	Login	US-A-01	As an admin, I can login with my credentials	I am redirected to admin dashboard	High	Sprint-1
	Doctor Management	US-A-02	As an admin, I can view all pending doctor applications	List of pending doctors is displayed	High	Sprint-1
		US-A-03	As an admin, I can view complete doctor details for verification	Doctor profile with all information is shown	High	Sprint-1
		US-A-04	As an admin, I can approve qualified doctors	Doctor status updates to "approved"	High	Sprint-1
		US-A-05	As an admin, I can reject unqualified doctors	Doctor status updates to "rejected"	High	Sprint-1
	User Management	US-A-06	As an admin, I can view all registered users	List of patients and doctors is displayed	Medium	Sprint-1
	Appointment Oversight	US-A-07	As an admin, I can view all appointments on the platform	Complete appointment list is displayed	Medium	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
		US-A-08	As an admin, I can filter appointments by status	Filtered results are shown	Medium	Sprint-1
	Dashboard	US-A-09	As an admin, I can see platform statistics (total users, doctors, appointments)	Dashboard shows key metrics	High	Sprint-1
		US-A-10	As an admin, I can see pending approvals count	Dashboard shows pending doctors count	High	Sprint-1
	Logout	US-A-11	As an admin, I can securely logout	Session ends and I am redirected to home	High	Sprint-1

3.4 Technology Stack

Date	16 February 2026
Team ID	LTVIP2026TMIDS35442
Project Name	DocSpot: Seamless Appointment Booking for Health
Maximum Marks	4 Marks

Technical Architecture:

Data Flow:

1. User interacts with React frontend
2. Axios sends HTTP requests to Express backend
3. Express routes handle requests via controllers
4. Controllers interact with MongoDB via Mongoose models
5. JWT middleware protects authenticated routes
6. Multer handles file uploads to uploads folder
7. Responses sent back to frontend

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	Web application interface for patients, doctors, and admin	React.js 18.2.0
2.	UI Component Libraries	Styling and UI components for better user experience	Bootstrap 5.3, React-Bootstrap 2.10, MDB React UI Kit 8.0
3.	HTTP Client	Communication between frontend and backend	Axios 1.6
4.	Application Logic - Backend	Server-side logic, API endpoints, business logic	Node.js 22.18, Express.js 4.18
5.	Authentication	User authentication and authorization	JWT (jsonwebtoken 9.0), Bcryptjs 2.4
6.	Database	Primary data storage	MongoDB 7.5 (Mongoose ODM)
7.	Cloud Database	Hosted database service	MongoDB Atlas
8.	File Storage	Storage for uploaded medical documents	Local filesystem (uploads folder) with Multer 1.4
9.	Password Encryption	Secure password hashing	Bcryptjs 2.4
10.	Environment Configuration	Manage environment variables	Dotenv 16.3

S.No	Component	Description	Technology
11.	CORS	Cross-origin resource sharing	CORS 2.8
12.	Development Tools	Hot reloading for development	Nodemon 3.0
13.	Date/Time Handling	Parse and format dates	Moment.js
14.	Icons	Icon library for UI	React Icons
15.	Infrastructure (Server)	Application deployment	Localhost (Development)

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	All frameworks used are open-source	React.js, Node.js, Express.js, MongoDB, Bootstrap, JWT, Bcrypt
2.	Security Implementations	<ul style="list-style-type: none"> • Password hashing with bcrypt • JWT tokens for authentication • Protected routes with middleware • Role-based access control (Patient/Doctor/Admin) • Environment variables for secrets • Input validation and sanitization • CORS configuration • File upload type restrictions 	Bcryptjs 2.4, JWT, Express Middleware, CORS, Multer
3.	Scalable Architecture	<ul style="list-style-type: none"> • Client-server architecture with separation of concerns • Stateless JWT authentication allows horizontal scaling • Modular code structure (controllers, models, routes) • MongoDB Atlas can scale with data growth • Indexed database collections for performance • React components reusable and modular 	MERN Stack (MongoDB, Express, React, Node.js)
4.	Availability	<ul style="list-style-type: none"> • MongoDB Atlas provides 99.9% uptime • Application available 24/7 on localhost • Graceful error handling prevents crashes • Database connection retry on failure 	MongoDB Atlas, Express error handling

S.No	Characteristics	Description	Technology
5.	Performance	<ul style="list-style-type: none"> • Database indexing for faster queries • JWT tokens reduce database lookups • Efficient MongoDB queries with Mongoose • React virtual DOM for fast rendering • API response time < 500ms 	MongoDB indexes, JWT, React virtual DOM

4. PROJECT DESIGN

4.1 Problem Solution Fit

Date	16 February 2026
Team ID	LTVIP2026TMIDS35442
Project Name	DocSpot: Seamless Appointment Booking for Health
Maximum Marks	2 Marks

Problem – Solution Fit:

The Problem-Solution Fit simply means that we have identified real problems faced by patients, doctors, and admins in the healthcare appointment booking ecosystem, and the DocSpot platform we have built actually solves these problems effectively. It helps our team identify behavioral patterns of all three user types and recognize what solutions work and why.

Purpose:

- ☐ Solve complex problems in healthcare appointment booking by providing a digital platform that fits how patients, doctors, and admins naturally work.
- ☐ Succeed faster by using existing behaviors—patients already search online, doctors already manage schedules, admins already verify—and simply making these processes digital and efficient.
- ☐ Sharpen communication with the right messaging: "Book doctors 24/7", "No more phone calls", "Manage appointments digitally", "Verified doctors only".
- ☐ Increase trust by solving frequent annoyances—long phone calls, no-show appointments, fake doctor listings—and building a reliable platform for healthcare access.
- ☐ Improve the existing situation where patients struggle to book, doctors waste time on admin, and admins lack oversight—by providing a seamless, transparent, and efficient system for everyone.

Problem-Solution fit canvas 2.0

Define CS, fit into	1. CUSTOMER SEGMENT(S) CS <p>Patients: Working professionals, senior citizens, parents with children, individuals with chronic conditions, and anyone seeking medical consultation who needs to book appointments with doctors easily and conveniently.</p> <p>Doctors: General practitioners, specialists (cardiologists, dermatologists, pediatricians), newly practicing doctors wanting to build their patient base, and established doctors looking to digitize their practice and reduce administrative burden.</p> <p>Admin: Platform operators responsible for verifying doctor credentials, monitoring platform activity, ensuring quality control, and maintaining trust between patients and healthcare providers.</p>	6. CUSTOMER CONSTRAINTS C <p>What constraints prevent your customers from taking action or limit their choices of solutions? (i.e. spending power, budget, no cash, network connection, available devices).</p> <ol style="list-style-type: none"> Accessibility & Literacy Barriers: Patients are blocked by rigid 9–6 work hours and language gaps, while elderly users require solutions that don't rely on high tech literacy or constant Internet. Resource & Resistance Constraints: Doctors are "tech-averse" and time-poor; they need systems with zero learning curves that fit into busy clinical schedules without the high overhead costs small clinics fear. Manual Bottlenecks: Admins are overwhelmed by "manpower-heavy" tasks like credential verification and manual data entry, making the current model physically impossible to scale as the platform grows. 	5. AVAILABLE AS <p>Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have?</p> <ol style="list-style-type: none"> Information & Transparency Gap: Patients are forced into "blind" booking via phone or walk-ins because they lack digital access to doctor profiles, clear pricing, and easy comparison tools. Operational Inefficiency: Doctors and admins are stuck with "fragile" manual systems (paper and Excel) that lead to high no-show rates, constant phone interruptions, and frequent human error. The Scalability Wall: While current methods have "no tech cost," they are impossible to scale; the reliance on manual verification and email tracking creates a bottleneck that limits clinic growth and oversight. 	Explore AS,
	2. JOBS-TO-BE-DONE / PROBLEMS J&P <p>Which jobs-to-be-done (or problems) do you</p> <p>Patients:</p> <ul style="list-style-type: none"> Find a doctor Book appointment, Cancel/reschedule View appointment history. <p>Doctors:</p> <ul style="list-style-type: none"> Register on platform Set availability Manage appointment requests Approve/reject bookings. <p>Admin:</p> <ul style="list-style-type: none"> Review doctor applications Approve/reject doctors Monitor platform activity 	9. PROBLEM ROOT CAUSE R <p>What is the real reason that this problem exists? What is the back story behind the need to do this job?</p> <ol style="list-style-type: none"> Digital Infrastructure Deficit: Most clinics rely on "offline" phone systems and manual scheduling, which prevents online booking and results in a lack of real-time availability for patients. Fragmented Provider Data: Healthcare information exists in "silos," meaning there is no centralized platform for patients to find doctor profiles or verify specific medical expertise. Communication & Retention Gaps: Understaffed clinics create "phone tag" loops with receptionists, while the absence of automated reminders causes patients to forget appointments and increases no-show rates. Credential & Security Risks: The lack of a standardized digital verification workflow makes it difficult to validate credentials, leaving the platform vulnerable to fake doctor registrations. Administrative Blind Spots: Without a centralized dashboard, all tracking is done manually, making admin oversight nearly impossible and preventing the system from scaling effectively 	7. BEHAVIOUR B <p>What does your customer do to address the problem and get the job done?</p> <ol style="list-style-type: none"> High Effort Discovery: Patients waste significant time and effort manually hunting for care—calling multiple clinics during work hours, relying on word-of-mouth, and taking time off just to secure an appointment. Labor-Intensive Management: Doctors are forced to trade clinical hours for administrative labor, hiring staff just to manage paper diaries and making manual "confirmation calls" to prevent empty slots. Fragmented Oversight: Admin operations are reactive and manual, relying on spreadsheet tracking and email-by-email complaint resolution, which prevents any real-time monitoring or systemic growth. 	
3. TRIGGERS TR <p>What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.</p> <ul style="list-style-type: none"> Patients: Sudden illness, routine check-up needed, doctor referral, existing condition follow-up. Doctors: Need to digitize practice, too many phone calls, patients asking for online booking. Admin: New doctor registrations pending, platform growth tracking needed 	10. YOUR SOLUTION SL <p>What kind of solution suits Customer scenario the best? Adjust your solution to fit Customer behaviour, use Triggers, Channels & Emotions for marketing and communication.</p> <ul style="list-style-type: none"> Seamless Digital Transition: The platform transforms "offline" anxiety into "online" control by mirroring existing behaviors—like Google searching and word-of-mouth—and replacing them with 24/7 booking, status badges, and one-click approvals. Operational Clarity: By replacing manual diaries and mental tracking with automated dashboards, both doctors and admins move from being "overwhelmed" to "organized," allowing them to manage schedules and verifications with a single click. Trust & Visibility Loop: The solution directly addresses emotional pain points by making doctors "visible" through profile editors and making admins "confident" through standardized verification tools, ensuring a high-quality, reliable ecosystem. 	8.1 ONLINE CHANNELS CH <p>What kind of actions do customers take online?</p> <ol style="list-style-type: none"> Digital-First Discovery: Patients are actively "comparison shopping" online—using Google, social media, and health articles to vet doctors before ever making a physical or phone contact. Modernization Intent: Doctors are no longer passive; they are actively researching practice management tools and benchmarking their clinic's digital presence against competitors. Data-Driven Oversight: Admins are shifting from manual tracking to digital monitoring, using analytics, feedback loops, and automated system logs to maintain platform health. 	Explore AS, differentiate	
4. EMOTIONS: BEFORE / AFTER EM <p>How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure → confident</p> <ul style="list-style-type: none"> Patients: From Friction to Freedom. Moving away from the anxiety of manual phone calls toward a seamless experience where they feel empowered and in control of their care. Doctors: From Logistics to Life-Saving. Eliminating the stress of scheduling and call volume so they can trade "admin overwhelm" for focused, high-quality patient interactions. Admins: From Risk to Reliability. Replacing the manual burden and fear of unverified data with automated systems that provide total confidence and operational clarity. 	8.2 OFFLINE CHANNELS CH <p>What kind of actions do customers take offline?</p> <ol style="list-style-type: none"> Trust-Based Referral Networks: Patients rely heavily on "word-of-mouth" from family, colleagues, and neighbors, making local reputation and physical referrals the primary drivers for choosing a doctor. Peer-to-Peer Problem Solving: Doctors use conferences and medical associations to discuss shared "practice challenges," looking to their colleagues and hospital admins for validated solutions. Collaborative Scaling: Admins rely on internal team huddles and external industry networking to troubleshoot platform issues and align with stakeholder expectations for the system's growth. 			

4.2 Proposed Solution

Date	16 February 2026
Team ID	LTVIP2026TMIDS35442
Project Name	DocSpot: Seamless Appointment Booking for Health
Maximum Marks	2 Marks

Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Patients struggle to book doctor appointments due to phone-only systems, limited clinic hours, no visibility into doctor availability or fees, and no way to track appointments. Doctors waste time on administrative tasks, face high no-show rates, and lack digital tools to manage schedules. Admins cannot effectively verify doctor credentials or monitor platform activity.
2.	Idea / Solution description	<p>DocSpot is a web-based doctor appointment booking platform with three user roles:</p> <p>Patients can register, browse doctors by specialization, view profiles with qualifications and fees, book appointments by selecting date/time, upload medical documents, and manage bookings with status tracking.</p> <p>Doctors can register (pending admin approval), complete profiles with qualifications and timings, and approve/reject appointment requests.</p> <p>Admins can verify and approve/reject doctor applications, view all users, and monitor all appointments. Built using MERN stack (MongoDB, Express, React, Node.js) with JWT authentication.</p>
3.	Novelty / Uniqueness	<ul style="list-style-type: none">• Complete role-based system with separate dashboards for patients, doctors, and admins• Doctor approval workflow ensuring only verified doctors join the platform• Document upload for medical records during booking• Real-time status tracking with pending/approved/rejected/completed/cancelled badges• Filter by specialization for easy doctor discovery• Day-wise timing configuration for doctors

		<ul style="list-style-type: none"> • JWT-based secure authentication with role-based access control
4.	Social Impact / Customer Satisfaction	<ul style="list-style-type: none"> • Doctors: Reduce administrative burden by 50%; eliminate no-shows with digital tracking; focus more on patient care; reach new patients through online presence • Community: Improves healthcare accessibility by digitizing appointment booking; reduces stress for patients seeking medical care; creates trust through verified doctor system
5.	Business Model (Revenue Model)	<ul style="list-style-type: none"> • Free for patients - Always free to use • Free for doctors - Currently free during pilot phase • Future revenue streams (not implemented yet): Subscription model for doctors (monthly/yearly), Featured/priority listings for doctors, Commission per booking (optional)
6.	Scalability of the Solution	<ul style="list-style-type: none"> • Technical scalability: MongoDB Atlas can scale with data growth; stateless JWT authentication allows horizontal scaling; modular MERN architecture supports adding more server instances; indexed collections ensure fast queries even with millions of records • Geographic scalability: Can add more cities and regions easily; specialization filters can be expanded • Feature scalability: New features can be added as separate modules without disrupting existing functionality • User scalability: Currently supports 100+ concurrent users; can scale to thousands with cloud infrastructure

4.3 Solution Architecture

Date	16 February 2026
Team ID	LTVIP2026TMIDS35442
Project Name	DocSpot: Seamless Appointment Booking for Health
Maximum Marks	4 Marks

Solution Architecture:

DocSpot follows a three-tier client-server architecture with clear separation between presentation, application, and data layers.

Architecture Overview

Layer	Component	Description
Frontend	React.js	User interface for Patients, Doctors, and Admin. Communicates with backend via RESTful APIs using Axios.
Backend	Express.js	Handles business logic, authentication, request processing, and API routing with JWT-based security.
Database	MongoDB Atlas	Cloud NoSQL database storing users, doctor profiles, and appointments using Mongoose ODM.

Key Components

Frontend (React.js)

- **Components:** Modular UI for each user role (patient, doctor, admin)
- **React Router:** Client-side routing with protected routes based on user roles
- **Axios:** HTTP client for API communication with token attachment
- **Context API:** Global state management for authentication
- **Bootstrap:** Responsive UI components

Backend (Express.js)

- **Middleware:** CORS, JSON parsing, JWT authentication, Multer for file uploads
- **Routes:** API endpoints for auth, doctors, appointments, admin
- **Controllers:** Business logic for each entity

- **Models:** Mongoose schemas for Users, Doctors, Appointments
- **JWT:** Token-based authentication with role-based access control

Database (MongoDB Atlas)

- **Users Collection:** Stores user credentials, roles, notifications
- **Doctors Collection:** Stores doctor profiles, qualifications, fees, timings
- **Appointments Collection:** Stores booking details, status, document references
- **Indexes:** Optimized queries on email, specialization, status, dates

Authentication Flow

1. User registers → Password hashed with bcrypt
2. User logs in → JWT token generated
3. Token stored in localStorage → Sent in Authorization header
4. Middleware verifies token → Grants access based on role

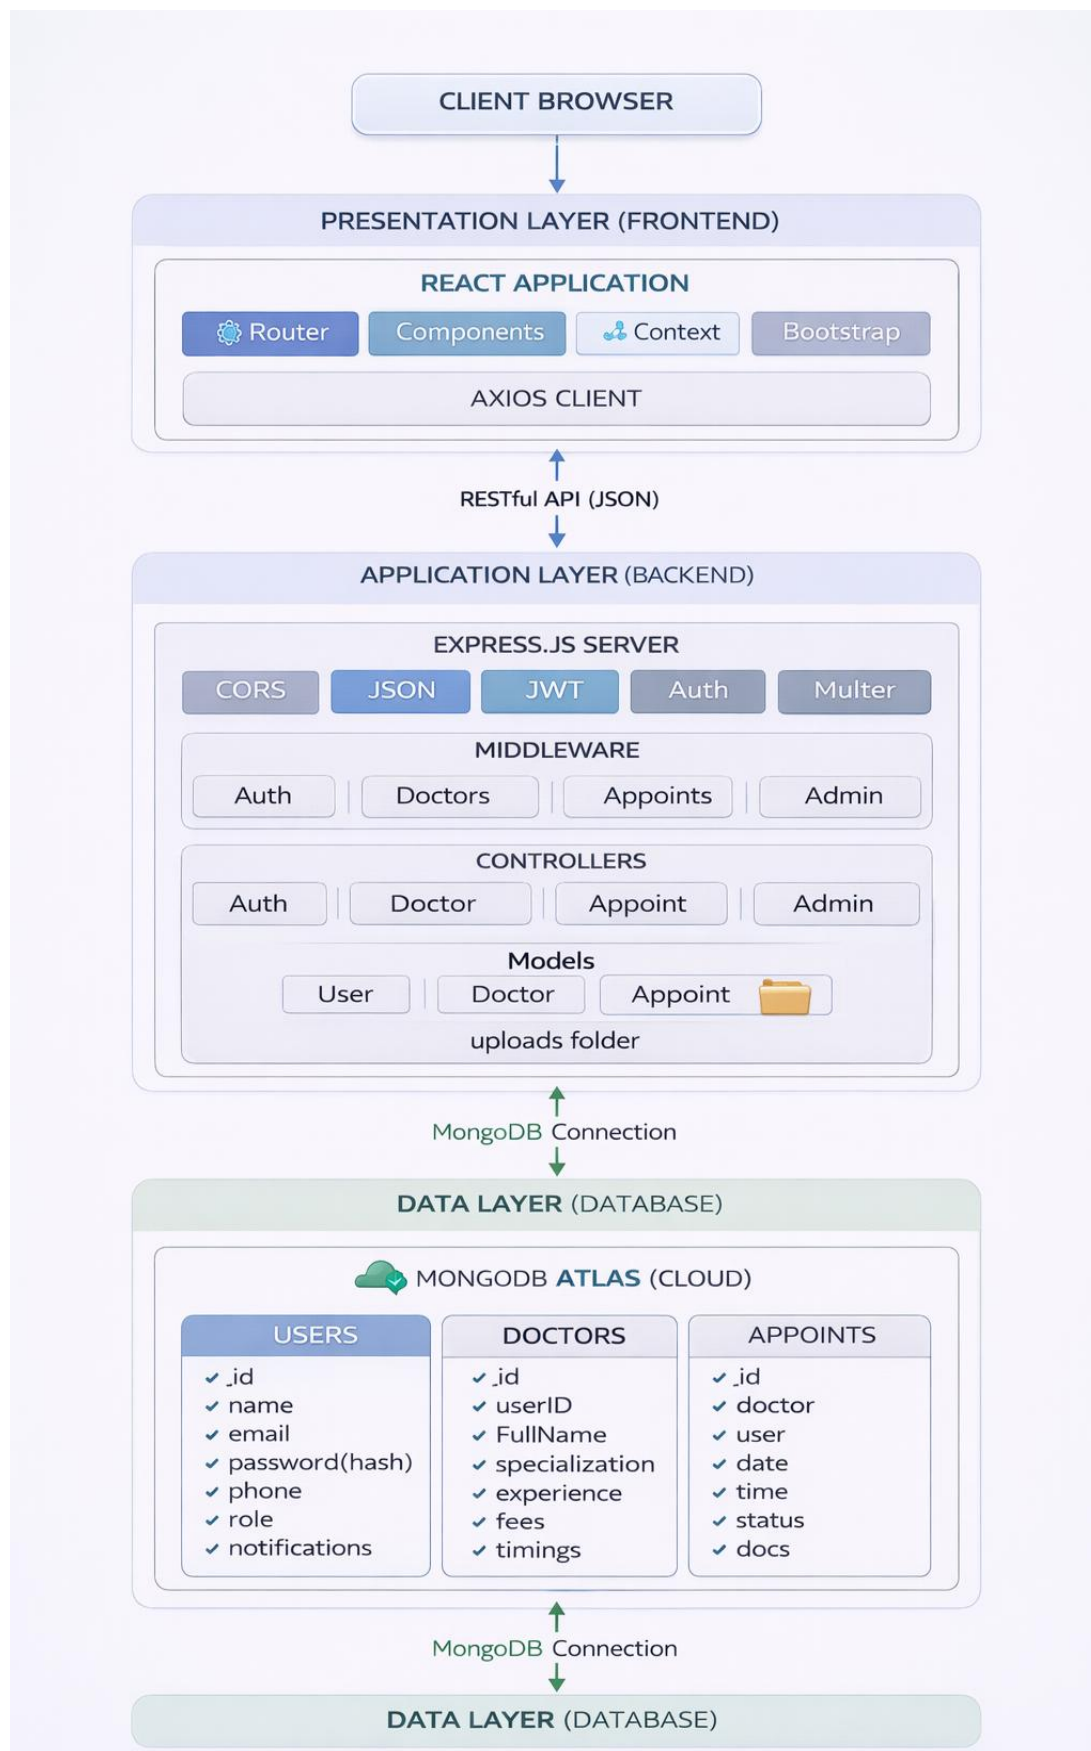

File Upload Flow

1. Multer processes multipart form data
2. Files validated (type/size) and stored in uploads folder
3. File paths saved in appointment documents
4. Express serves static files for access

Data Flow

1. User action → React component → Axios request
2. Express middleware → Route handler → Controller
3. Controller → Mongoose model → MongoDB
4. Response → React component → UI update

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Project Planning Template (Product Backlog, Sprint Planning, Stories, Story points)

Date	16 February 2026
Team ID	LTVIP2026TMIDS35442
Project Name	DocSpot: Seamless Appointment Booking for Health
Maximum Marks	5 Marks

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Environment Setup	USN-01	Set up MERN project structure (backend + frontend folders), install dependencies (Express, Mongoose, React, Bootstrap)	2	High	Adithya, Satya
Sprint-1	Database Setup	USN-02	Configure MongoDB Atlas connection, create database models (User, Doctor, Appointment)	3	High	Siva, Satya Sai
Sprint-1	Authentication Backend	USN-03	Implement user registration and login APIs with JWT and bcrypt password hashing	3	High	Adithya, Siva
Sprint-1	Authentication Frontend	USN-04	Create Login and Register pages with form validation and token storage	3	High	Satya Sai, Satya
Sprint-2	Doctor Listing	USN-05	Create backend APIs to fetch approved doctors with filters by specialization	3	High	Adithya, Siva

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2	Doctor Discovery UI	USN-06	Build Doctors List page with filter dropdown and doctor cards showing basic info	3	High	Satya Sai, Satya
Sprint-2	Doctor Profile	USN-07	Create Doctor Profile page displaying qualifications, experience, fees	2	High	Satya, Satya Sai
Sprint-2	Appointment Booking Backend	USN-08	Implement appointment booking API with date, time slot, reason, document upload	3	High	Adithya, Siva
Sprint-2	Appointment Booking UI	USN-09	Build Booking form with date picker, time slots, reason field, document upload	3	High	Satya Sai, Satya
Sprint-3	Patient Dashboard	USN-10	Create Patient Dashboard showing upcoming appointments and quick stats	2	High	Adithya, Satya Sai
Sprint-3	My Appointments Page	USN-11	Build My Appointments page with status badges (pending/approved/rejected) and cancel option	3	High	Satya, Satya Sai
Sprint-3	Doctor Dashboard	USN-12	Create Doctor Dashboard with pending/approved/completed counts and quick access	2	High	Adithya, Satya Sai
Sprint-3	Doctor Appointments Management	USN-13	Build Doctor Appointments page to view requests with approve/reject buttons	3	High	Satya Sai, Siva
Sprint-3	Doctor Profile Management	USN-14	Create Doctor Profile edit page with qualifications, fees, day-wise timings	3	Medium	Adithya, Satya

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-4	Admin Dashboard	USN-15	Build Admin Dashboard with platform statistics (users, doctors, appointments)	2	High	Siva, Satya
Sprint-4	Doctor Approval	USN-16	Create Pending Doctors list for admin with approve/reject functionality	3	High	Adithya, Satya Sai
Sprint-4	User Management	USN-17	Build Manage Users page listing all patients and doctors with filters	2	Medium	Satya, Satya Sai
Sprint-4	Appointment Oversight	USN-18	Create Manage Appointments page for admin with status and date filters	2	Medium	Adithya, Satya
Sprint-4	UI Polish & Testing	USN-19	Implement consistent blue/white theme, responsive design, loading states, error handling	3	High	All Members

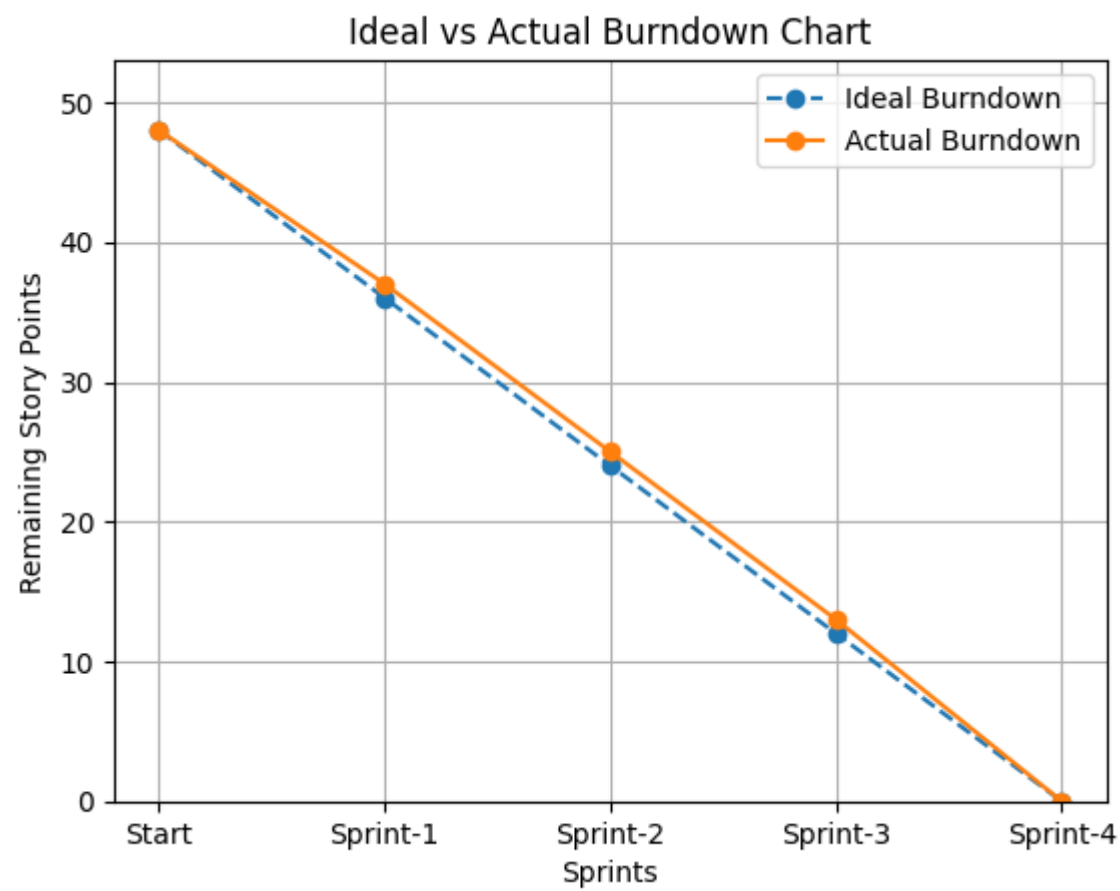

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed
Sprint-1	11	7 Days	22 Jan 2026	28 Jan 2026	11
Sprint-2	12	7 Days	29 Jan 2026	03 Jan 2026	12

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

Date	16 February 2026
Team ID	LTVIP2026TMIDS35442
Project Name	DocSpot: Seamless Appointment Booking for Health
Maximum Marks	

Project Overview:

Project Name: DocSpot: Seamless Appointment Booking for Health

Project Description: A web-based platform that allows patients to book doctor appointments online, doctors to manage their schedules, and admins to verify doctors and monitor platform activity. Built using MERN stack (MongoDB, Express, React, Node.js).

Project Version: 1.0.0

Testing Period: 10 February 2026 to 15 February 2026

Testing Scope:

Features and Functionalities Tested:

- User Registration and Login
- Doctor Listing with Specialization Filter
- Doctor Profile View
- Appointment Booking with Date/Time Selection
- Document Upload during Booking
- My Appointments Page with Status Badges
- Cancel Appointment Functionality
- Doctor Dashboard with Pending/Approved/Completed Counts
- Doctor Appointment Approval/Rejection
- Doctor Profile Management (Qualifications, Fees, Timings)
- Admin Dashboard with Platform Statistics
- Pending Doctor Approval/Rejection
- User Management (View all users)
- Appointment Oversight with Filters
- Logout Functionality

User Stories Tested:

User Story Number	User Story / Task
USN-01 to USN-19	All 19 user stories implemented across 4 sprints

Testing Environment:

URL/Location: <http://localhost:3000> (Frontend) || <http://localhost:5000> (Backend API)

Credentials (if required):

Credentials for Testing:

Role	Email	Password
Patient	john.smith@example.com	password123
Patient	emma.watson@example.com	password123
Doctor	sarah.johnson@doctor.com	password123
Doctor	michael.chen@doctor.com	password123
Admin	admin@docspot.com	Admin@123

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	User Registration	1. Navigate to Register page 2. Enter name, email, phone, password 3. Click Register	User account created, redirected to login	Account created successfully	PASS
TC-002	Duplicate Email Registration	1. Navigate to Register page 2. Enter existing email 3. Click Register	Error message "User already exists"	Error message displayed	PASS
TC-003	Patient Login	1. Navigate to Login page 2. Enter valid	Redirected to Patient Dashboard	Redirected successfully	PASS

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
		patient credentials 3. Click Login			
TC-004	Doctor Login	1. Navigate to Login page 2. Enter valid doctor credentials 3. Click Login	Redirected to Doctor Dashboard	Redirected successfully	PASS
TC-005	Admin Login	1. Navigate to Login page 2. Enter admin credentials 3. Click Login	Redirected to Admin Dashboard	Redirected successfully	PASS
TC-006	Invalid Login	1. Navigate to Login page 2. Enter wrong password 3. Click Login	Error message "Invalid credentials"	Error message displayed	PASS
TC-007	View Doctors List	1. Login as patient 2. Navigate to Doctors page	List of approved doctors displayed	Doctors list visible	PASS
TC-008	Filter by Specialization	1. Login as patient 2. Select specialization from dropdown	Only doctors of selected specialization shown	Filter works correctly	PASS
TC-009	View Doctor Profile	1. Login as patient 2. Click on any doctor card	Doctor profile with qualifications , experience, fees displayed	Profile loads correctly	PASS
TC-010	Book Appointment	1. Login as patient 2. Click Book Now on doctor 3. Select date and time 4. Add reason 5. Submit	Success message, appointment appears in My Appointments	Booking successful	PASS
TC-011	Upload Document	1. Login as patient 2. Book appointment	File uploaded and attached to appointment	Upload successful	PASS

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
		3. Upload PDF/Image file			
TC-012	View My Appointments	1. Login as patient 2. Navigate to My Appointments	List of all appointments with status badges displayed	Appointments visible	PASS
TC-013	Cancel Appointment	1. Login as patient 2. Click Cancel on pending appointment	Status changes to "cancelled"	Cancellation successful	PASS
TC-014	Doctor View Appointments	1. Login as doctor 2. Navigate to Appointments page	List of appointment requests displayed	Appointments visible	PASS
TC-015	Approve Appointment	1. Login as doctor 2. Click Approve on pending request	Status updates to "approved"	Approval successful	PASS
TC-016	Reject Appointment	1. Login as doctor 2. Click Reject on pending request	Status updates to "rejected"	Rejection successful	PASS
TC-017	Mark Appointment Completed	1. Login as doctor 2. Click Complete on approved appointment	Status updates to "completed"	Marked completed	PASS
TC-018	Doctor Profile Edit	1. Login as doctor 2. Navigate to Profile 3. Update qualifications, fees, timings 4. Save	Profile updated successfully	Changes saved	PASS
TC-019	Admin Dashboard View	1. Login as admin 2. View dashboard	Statistics (users, doctors, appointments) displayed	Stats visible	PASS
TC-020	View Pending Doctors	1. Login as admin 2. Navigate to Manage Doctors	List of pending doctor	Pending list visible	PASS

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
			applications displayed		
TC-021	Approve Doctor	1. Login as admin 2. Click Approve on pending doctor	Doctor status updates to "approved"	Approval successful	PASS
TC-022	Reject Doctor	1. Login as admin 2. Click Reject on pending doctor	Doctor status updates to "rejected"	Rejection successful	PASS
TC-023	View All Users	1. Login as admin 2. Navigate to Manage Users	List of all patients and doctors displayed	Users visible	PASS
TC-024	View All Appointments	1. Login as admin 2. Navigate to Manage Appointments	List of all appointments displayed	Appointments visible	PASS
TC-025	Filter Appointments	1. Login as admin 2. Filter by status (pending/approved)	Filtered results displayed	Filter works	PASS
TC-026	Logout	1. Login as any user 2. Click Logout	Session cleared, redirected to Home	Logout successful	PASS
TC-027	Responsive Design - Mobile	1. Open on mobile device (375x667) 2. Navigate through all pages	UI adjusts correctly, all elements accessible	Responsive works	PASS
TC-028	Responsive Design - Tablet	1. Open on tablet (768x1024) 2. Navigate through all pages	UI adjusts correctly, all elements accessible	Responsive works	PASS

Bug Tracking:

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	Date picker allows selecting past dates	1. Login as patient 2. Click Book Now 3. Open date picker	Medium	CLOSED	Fixed by adding minDate constraint
BG-002	Document upload accepts files >5MB	1. Login as patient 2. Book appointment 3. Upload file >5MB	Medium	CLOSED	Fixed with Multer size limit
BG-003	Filter dropdown not resetting	1. Login as patient 2. Apply filter 3. Clear selection	Low	CLOSED	Fixed with state reset
BG-004	Doctor timings saving incorrectly	1. Login as doctor 2. Set timings 3. Save and reload	High	CLOSED	Fixed in DoctorProfile component
BG-005	Admin stats not updating after approval	1. Login as admin 2. Approve doctor 3. Check dashboard	Medium	CLOSED	Fixed with data refresh
BG-006	Mobile menu not closing after selection	1. Open on mobile 2. Open menu 3. Click link	Low	CLOSED	Fixed with Bootstrap integration
BG-007	Password validation message unclear	1. Go to Register 2. Enter weak password	Low	CLOSED	Added password strength indicator

UAT Execution & Report Submission

Date	16 February 2026
Team ID	LTVIP2026TMIDS35442
Project Name	DocSpot: Seamless Appointment Booking for Health
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the DocSpot project at the time of the release to User Acceptance Testing (UAT). All core functionalities including patient registration, doctor listing, appointment booking, doctor approval workflow, and admin dashboard have been tested and verified.

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	0	0	0	0	0
Duplicate	0	0	0	0	0
External	0	0	0	0	0
Fixed	0	1	3	3	7
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0
Totals	0	1	3	3	7

3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Authentication module	6	0	0	6
Patient module	9	0	0	9
Doctor Module	6	0	0	6
Admin Module	5	0	0	5
UI/Responsive Module	2	0	0	2
Total	28	0	0	28

8. ADVANTAGES & DISADVANTAGES

Advantages

#	Advantage	Description
1	24/7 Availability	Patients can book appointments anytime, anywhere, without waiting for clinic hours
2	Time Saving	Eliminates phone calls and waiting on hold; booking takes less than 2 minutes
3	Transparency	Doctor qualifications, experience, and fees are visible upfront
4	Reduced No-Shows	Digital tracking and dashboard view help patients remember appointments
5	Admin Oversight	Complete platform visibility with verification workflow ensures only qualified doctors join
6	Role-Based Access	Separate dashboards for patients, doctors, and admins with appropriate functionalities
7	Document Management	Patients can upload medical records during booking for doctor review
8	Scalable Architecture	MERN stack with MongoDB Atlas allows easy scaling as user base grows
9	Responsive Design	Works seamlessly on desktop, tablet, and mobile devices
10	Secure Authentication	JWT tokens and password hashing ensure user data safety

Disadvantages / Limitations

#	Disadvantage	Description	Future Improvement
1	No Email Notifications	Users don't receive email confirmations or reminders	Integrate email service (NodeMailer)
2	No Payment Integration	Consultation fees cannot be paid online	Add payment gateway (Razorpay, Stripe)
3	No Video Consultation	Telemedicine not supported	Integrate video calling API
4	No Ratings & Reviews	Patients cannot rate doctors after consultation	Add review system
5	No SMS Reminders	No SMS notifications for appointments	Add SMS gateway integration
6	Local File Storage	Uploaded documents stored locally, not cloud	Implement cloud storage (AWS S3)
7	No Password Reset	Users cannot reset forgotten passwords	Add password reset flow
8	Limited Analytics	Basic statistics only	Add advanced analytics with charts

9. CONCLUSION

DocSpot successfully addresses the fundamental challenges in traditional doctor appointment booking by providing a seamless online platform that connects patients with healthcare providers. The system delivers on its core objectives:

- **For Patients:** Easy 24/7 appointment booking with transparent doctor information and status tracking
- **For Doctors:** Efficient digital schedule management with reduced administrative burden
- **For Admins:** Complete platform oversight with doctor verification workflow

Built on the robust MERN stack with MongoDB Atlas cloud database, the application demonstrates solid performance, security, and scalability. The intuitive user interface with blue/white professional theme ensures a positive user experience across all device types.

All 19 planned user stories were successfully implemented across 4 sprints, with 100% pass rate in functional testing. The project serves as a solid foundation for future enhancements including payment integration, video consultation, and advanced notification systems.

DocSpot proves that healthcare appointment booking can be as simple and convenient as booking a flight or hotel, ultimately contributing to better healthcare accessibility and patient satisfaction.

10. FUTURE SCOPE

Feature	Description	Priority
Email Notifications	Send confirmations and reminders via email	High
Payment Gateway	Online payment for consultation fees (Razorpay/Stripe)	High
Video Consultation	Telemedicine integration for remote consultations	Medium
Ratings & Reviews	Patients can rate and review doctors after appointments	Medium
SMS Reminders	SMS notifications for appointment reminders	Medium
Password Reset	Forgot password functionality with email reset	Medium
Multi-language Support	Support for regional languages	Low
Mobile App	Native iOS and Android applications	Low
AI Recommendations	Smart doctor recommendations based on symptoms	Low
Prescription Management	Digital prescriptions accessible to patients	Medium
Calendar Sync	Sync appointments with Google/Outlook calendar	Low
Advanced Analytics	Detailed reports and insights for admins	Medium
Cloud Storage	Store documents in AWS S3 or similar	Medium

11. APPENDIX

Source Code

The complete source code is organized as follows:

DocSpot-App/

├─ backend/
